

Case: Samsung, Object Samsung Galaxy Tab S2 {Battery 40% to 0%}
Versus All Samsung Galaxy Tab S2 object owners

Supervision Problem:

The Samsung Galaxy Tab S2 Deactivates by a 40% battery and not rewired to any power supply & When it is deactivated it automatic reactivates when the tab S2 is reactivated it automatic deactivates with a continues repeating of deactivation & reactivation what revolves in a battery of 0%

Supervision Violation:

The fact that this battery better be not lower loaded than 40% to insure a longer battery lifetime, so the fact that the Tab S2 deactivates at 40% is correct but so as programmed in the final upgrade of this device, the reactivation after mission to deactivate is in violation of the insurance for longer battery lifetime.
